

PRESS RELEASE

Updated Volvo EC230 Electric boasts full day operation

The advanced technology behind the new generation makeover of the 23-ton EC230 Electric excavator from Volvo Construction Equipment (Volvo CE) gives customers double the typical operating hours of its predecessor.

- Now capable of a full day of operation on a single charge, the upgraded EC230 Electric signals a groundbreaking and sustainable evolution in heavy construction.
- Furthermore, the battery-electric excavator combines state-of-the-art features and an updated design with enhanced efficiency, greater safety and superior operator experience.
- The zero-emission heavy-duty solution – available to see at Bauma 2025 – will be rolled out to customers in Europe and North America from Q1, 2025.

The launch of the updated EC230 Electric marks a significant milestone in the transition towards sustainable construction solutions, offering the same robust – and now long lasting – performance as its diesel counterpart but with the added benefits of zero exhaust emissions, near silent operation, reduced vibration and instant torque.

The mid-size machine, which has already been proving its worth on jobsites around the world, re-enters the market as the ideal partner for medium to heavy-duty applications, such as building, demolition and industrial material handling.

Kurt Deleu, Head of Product Management Excavators said: “Our first-generation EC230 Electric provided valuable customer insights and market feedback which played a pivotal role in shaping the development of this new generation model. With improved runtime, advanced technologies and expanded capabilities, the new and improved EC230 Electric builds on its strong legacy to deliver even greater benefits to customers and operators alike.”

Entering a new era of long-lasting power

Offering an extended runtime of 7-8 hours per charge – powered by its 600V lithium-ion battery with a capacity of 450 kWh – operators can now work a full day without interruption, making it ideal for noise-sensitive and environmentally restricted areas.

Moreover, a peak motor power of 160 kW ensures a performance equivalent to diesel excavators, while fast charging capabilities allow the battery to reach from 20% to 80% in just 1 hour with a 250 kW charger.

Hydraulic efficiency is also improved by 10% and – when matched with additional features such as Volvo Active Control, On-Board Weighing and Dig Assist 2D and 3D – the electric excavator offers unparalleled machine guidance and control. This not only provides more precise digging, shorter cycle times and reduced operator fatigue, but it sets a new standard for electric performance by maximizing productivity while minimizing environmental impact.

New generation updates

Building on the success of its predecessor, the enhanced EC230 Electric inherits a suite of improvements found in Volvo’s [new generation excavators](#). These include:

V O L V O

- An enhanced operator experience, thanks to a revamped cab environment with greater space, comfort and functionality,
- An intelligent electro-hydraulic system enabling smoother, more precise movements of the boom, bucket and other attachments, and
- Innovative safety features such as HD Volvo Smart View with People and Obstacle Classification providing operators with 360° visibility and deep-learning technology to detect potential hazards.

The new and improved EC230 Electric will be seen for the first time at Volvo's Bauma stand, from April 7-13, at the Messe München trade fair in Munich, Germany. Visitors will get the chance to see how its cutting-edge design and innovative features are helping to transform the industry with safer, more sustainable and more productive operation.

The new electric machine will be available in North America and select European markets starting in Q1, 2025. The first generation EC230 Electric will co-exist with the updated model for some time, with the current version suiting customers in light to medium duty applications, like waste and recycling and general construction.

Key specifications:

Operating weight	23.5 tons (51809 lbs)
Battery Type	Lithium-ion
Battery Capacity	450 kWh
Motor Power (Continuous)	110 kW
Motor Power (Peak)	160 kW
Runtime	7-8 hours (indicative)
Fast Charging Capability	Up to 250 kW (80% in 1.5 hrs)
Bucket Capacity	1.1 m ³ (38.8ft ³)
Breakout Force	149 kN

Volvo Construction Equipment (Volvo CE) is a global leader in construction solutions, delivering premium products and services that combine power and performance with a more sustainable way of working. We are a company driven by people and together we have a purpose: To build the world we want to live in. Founded in 1832 and with a distribution network across every major market, our many dedicated experts around the world are fulfilling our shared purpose through a focus on sustainability, electromobility and services. As well as our expanding range of electric machines and charging solutions, Volvo CE provides industry-leading haulers, loaders, excavators and much more, all built to suit the demands of our customers' varied construction and infrastructure needs. Volvo CE benefits from being connected to the Volvo Group, which also offers trucks, buses, power solutions for marine and industrial applications, financing and services that increase our customers' uptime and productivity. Through its holistic perspective, Volvo Group is committed to shaping the future landscape of sustainable transport and infrastructure solutions.
