

PRESS RELEASE

## Volvo CE compact excavators get a power boost with new hydraulic breakers

New hydraulic breakers are being introduced by Volvo Construction Equipment (Volvo CE) designed specifically for its smallest generation of compact excavators, offering enhanced precision and power to breaking applications.

The new hydraulic breakers, HB01 and HB02, are designed to work in harmony with Volvo CE's smallest compact excavators, delivering robust yet lightweight power ideal for urban and indoor projects. The HB01 is a brand-new class of hydraulic breaker, while the HB02 is an updated version of its predecessor, providing improved specifications.

Jérôme Guernier, Product Manager Attachments at Volvo CE, said: "At Volvo CE, our commitment to enhancing the productivity and versatility of our machines extends to our attachment options too. Our new hydraulic breakers, designed for our smallest compact machines, exemplify this commitment by delivering consistent impact frequency and power to tackle a variety of demanding materials. They are also low noise,

making them ideal for busy urban or indoor environments. With our extensive attachment range, we equip our customers with the right tools for any task, maximizing the potential of these flexible machines.”

Paired with the right attachments, compact excavators are hugely versatile work tools. Small but tough, as well as easy to transport, operate and service, they are capable of carrying out a variety of jobs in small, confined spaces, from digging holes and trenching, to light demolition work, landscaping, excavating and levelling, opening up new opportunities for customers.

### Lightweight power for urban and indoor projects

The HB01 is a new addition to the company’s hydraulic breaker range. Weighing just 79kg, it is engineered for optimal performance with Volvo’s smallest compact excavators, including the [ECR18E](#) and the [ECR18 Electric](#). The breaker’s lightweight design ensures that these short-radius machines remain stable, making it ideal for projects like trenching in congested urban areas and light indoor demolition.

The updated HB02 hydraulic breaker is slightly lighter than its predecessor and features a 45mm diameter tool. It retains the output power and productivity customers expect. Pin-grabber, Symmetrical and Lehnhoff breaker brackets are available for both models of hydraulic breaker.

### Keep your Volvo a Volvo

Different jobs require different attachments which is why Volvo CE offers a [comprehensive attachment range](#) for its compact excavators, including quick couplers, buckets, tiltrotators, hydraulic thumbs, and hydraulic breakers. Each attachment is designed to pair perfectly with Volvo CE machines, ensuring unmatched productivity, uptime, flexibility, and versatility.

Both the HB01 and HB02 are available immediately for customers in Europe. They can be ordered directly from the factory with a new compact excavator or purchased separately as a loose attachment to suit customer requirements.
